

Describing Archives: A Content Standard

Revised and updated in 2013, Describing Archives: A Content Standard (DACS) facilitates consistent, appropriate, and self-explanatory description of archival materials and creators of archival materials. This new edition reflects the growing convergence among archival, museum, and library standards; aligns DACS with the descriptive standards developed and supported by the International Council on Archives; and provides guidance on the creation of archival authority records. DACS can be applied to all types of material at all levels of description, and the rules are designed for use by any type of descriptive output, including MARC 21, Encoded Archival Description (EAD), and Encoded Archival Context (EAC). The Second Edition consists of two parts: Describing Archival Materials and Archival Authority Records. Separate sections discuss levels of description and the importance of access points to the retrieval of descriptions. Appendices feature a list of companion standards and crosswalks to ISAD(G), ISAAR(CPF), MARC 21, EAD, EAC, and Resource Description and Access (RDA). Also included is an index.
