

Systemic Functional Perspectives of Japanese: Descriptions and Applications (FUNCTIONAL LINGUISTICS)

While there have been occasional Systemic Functional treatments of Japanese before, this is the first volume dedicated to Japanese from a Systemic Functional perspective. This book is divided into descriptions and applications. The descriptions are further divided into the three metafunctions: textual, interpersonal and ideational. The applications of the descriptions are divided into education and computing. The contributions on education are a mixture of work on genres in Japanese and English, and applications of Systemic Functional theory to teaching Japanese as a second language. The contributions on computing present the application of Systemic Functional theory to the development of a Japanese language-based computer operating system. This volume features a foreword by Noboru Yamaguchi, one of the first linguists to explore Systemic Functional perspectives of Japanese.
