

Math Coach: A Parents Guide to Helping Children Succeed in Math

Every child has the potential for success in math. But sometimes today's educational system can leave children and parents perplexed. What is new math and how does it work or not work? What goals are realistic for your child? How do you make math fun instead of a chore? And how can you most effectively help your child learn? Even if parents can't remember a thing about fractions or word problems, this indispensable guide is so simple and straightforward that even the most confusing mathematical concepts seem easy to learn...and teach. Written by a former MIT professor and expert on learning, Math Coach shows parents how to evaluate their child's knowledge and school curriculum, then maximize their time, techniques, and learning materials. A lesson-by-lesson approach will help parents: Explain mathematical concepts in clear, simple language? Use the most effective techniques for teaching counting, addition, subtraction, multiplication, division, fractions, word problems, and algebra? Find study aids, teams, tournaments, and other ways to supplement their child's education.
