

## Internet Technology for Schools

A comprehensive guide to designing, establishing, and managing a K-12 Internet: School principals, administrators, teachers, and support staff will find everything they need to know about ensuring a safe and powerful online environment for their students. This is not a guide to websites or other ephemeral aspects of the Internet. Instead, it explains the fundamental concepts of local-area networking (LANs) inside the school facility, how to connect it to a wide-area network (WAN) within a community, such as a school system, and how to connect to the Internet. Topics include firewalls and other security concepts. In addition, aspects of online pedagogy are thoroughly covered.
