

Towards a Visual Culture: Educating through Television

Originally released in 1969, Towards a Visual Culture is a remarkably relevant read for today's teachers and programmers. Although the technology has evolved, humans remain visual learners and television remains a visual medium. In this book, Gattegno provides a framework for developing effective and efficient educational programs in an optimistic, forward-thinking manner. He foresees technology able to transmit all knowledge into all homes through satellites and computers, and urges educators and programmers to take advantage of the immense opportunities therein. The media are truly interchangeable - our eyes, our ability to perceive, and our awareness will always be the greatest educational tools.
