

PERCEPTIONS AND ATTITUDES IN DIFFUSION OF INNOVATIONS: TEACHERS ROLE IN THE IMPLEMENTATION OF COMPUTERS IN TRINIDAD AND TOBAGO

Computers are particularly beneficial to education. It is, therefore, important to study teachers attitudes and perceptions toward computers, which can well determine the successful diffusion and implementation of this innovation. As key change agents in the diffusion process, teachers must display positive attitudes and perceptions toward computers to ensure successful computer literacy programmes that can redound to improved human capital. This book examines the feasibility of a computer literacy campaign for teachers in Trinidad and Tobago (T&T) by focusing on the relationship between the independent variables (teachers' attitudes toward computers and perceived innovation characteristics) and the dependent variables (teacher satisfaction and utilization). The results underscore the importance of attitudinal and perceptual factors to the successful implementation of computers. The findings have policy-making implications regarding successfully implementing computers in education. In general, the study contributes towards understanding the importance of technology in education towards attaining the socioeconomic goals of developing countries.
