

In Flight with Sixth Grade Math - Student Edition (In Flight with Math Book 3)

In Flight with Sixth Grade Math - Student Edition: Consistent in its sequencing and presentation, the new or review material in each Lesson is introduced, explained, clarified, then illustrated through examples provided. Practice problems are then assigned for the student to complete independently. After reviewing the problems and answers with the student, a Worksheet or Lesson Wrap-Up activity is assigned. This format ensures comprehensive coverage of daily material, but also accommodates the need and or desire to condense, supplement, or combine Lessons and Lesson content. In Flight with Sixth Grade Math is dedicated to supporting each Lessons Objective by capturing the students immediate interest in the topic or concept. This can be accomplished by asking and allowing time for discussion of the students answer to the thematically tied Engaging Questions. Designed to be each Lessons opener, the Engaging Question can increase the students understanding and acquisition of the skill or principle being introduced or expanded. The following features of this text will assist students in acquiring, developing and building upon their 6th Grade Math skills and aptitude: Geometry Lessons are presented in a manner that encourages the student to first visualize, imagine, and think about the relationship between Geometry and other subjects and applications, such as Art and Industry, thereby helping the student bridge the gap between Math and other skill sets and fields of study. Writing and sketching assignments, to be completed in the students Math Journal, offer an alternative, appealing way for the student to develop and demonstrate his or her understanding of the mathematical principles and concepts. Many Lessons encourage the student to learn or create word associations and mnemonic devices for retaining the meanings of new terms presented through

the course. Material and concepts are introduced and reinforced by showing their purpose and relevance to the sixth graders perspective and familiar aspects of their daily life.
