

Planning for Research: A Guide for the Helping Professions (SAGE Human Services Guides)

This volume provides a basic foundation for understanding and doing research in various human services fields. The authors consider the theory and methodology for setting up a research study, explaining the scientific method and establishing a basic vocabulary. They guide the reader through the initial steps of the research process: defining a researchable problem, surveying the literature and selecting a sampling strategy. Finally, they present a how-to approach for collecting data and selecting a research design. Together with its companion volume *Implementing the Research Plan* the book provides the basic elements needed to participate in research.
