

# Learning to Mentor-as-Praxis: Foundations for a Curriculum in Teacher Education (Professional Learning and Development in Schools and Higher Education)

Lily Orland-Barak offers us a breathtaking work of science ?ction. Or perhaps I should say science and ?ction. The science side of the equation employs sophisticated technique for observing and describing interpersonal and intrapersonal dynamics among professionals in education. Both dramatic and seemingly ordinary episodes in the lives of teachers in relational tension with one another are analyzed with scientific care, precision, and insight. The scientific study of mentoring is like the scientific study of soap bubbles their formation, growth, and sudden exit from the visible world with a nearly soundless pop! Scientific and intellectual tools can be used to describe and predict the behavior of soap bubbles, to study their colors, shapes, surface tension, and tiny mass. The same is true of the study of mentoring. But in both cases, the greatest care must be taken to avoid popping the almost m- ically elegant form to avoid destroying the delicate relationship by rushing in, by heavy attempts at control, or by premature dissection, or even by paying attention too intensely to a private, personal relationship. Mentoring is best studied by being still, by listening with authentic interest, and by using our peripheral vision. The science and the scientist have done their best work here. The ?ction side of this ?ne book gives life to telling examples of mentoring in action.
