

## Power Monitoring Tool: Nalubale Power Site monitoring tool showing power consumption in homesteads of different income levels.

This project is about the design of an economically viable, socially acceptable and environmentally friendly small hydropower monitoring tool for Mukono as an agro-vet place though system design was based along Eskom at the falls, which when implemented can help the facilitation to supply hydro-electric power enough for rural household enterprises in Mukono district. Mukono district is one of the leading contributors to the agro-vet industry in Uganda especially Fish and pineapples. Mukono District has not benefited like other areas in the Rural Electrification Program in the past ten years. Reason, in the area of computing, the H.E.P (Hydro-Electricity Power) industry is still struggling with how to get the input/output method of computing the daily, weekly, or even annual consumption of power per household/min-hydro. Unfortunately, workers and other qualified employees have failed to monitor the quantifiable consumption of power on small-scale based industrial place so that they can come to a compromise on the issue of load shedding. This affects productive areas like Mukono.
