

A Banality of Evil: A Comparative Study of the WWII and Vietnam War News Frames During the Iraq War, 2001-2007

How can historical analogies to World War II and Vietnam influence policy decisions and outcomes? How were these analogies applied to describe the wars in Iraq and Afghanistan to the American public, and to what effect? How can these analogies deepen our understanding of political bias in war reporting? This book addresses these questions, and introduces the Frame Homogeneity Index (FHI), a probabilistic index that measures balance among competing news frames.
