

# An Introduction to Prehistoric Archeology

Most students will never excavate an archaeological site; indeed, they should not, but if as intelligent laymen they read reports of excavations or descriptions of life in prehistoric times, they need to be able to judge them in the light of current scientific procedure and belief. The purpose of this book is to introduce the study of mans past by showing how archaeologists reconstruct human history from the artifacts that have survived. It attempts to show how that the aims of archaeologists are closely related to those of historians, but that archaeologists must depend upon data, techniques, and services foreign to historians. To help the reader understand the complexity of prehistoric archaeology, the work brings together in an introductory way relevant background material that is not available in any other single publication. Although the text was written with the beginning student in mind, it can be used in a variety of ways. In itself the book presents a balanced and systematic overview of the history, method, and theory of archaeology. It is liberally supplied with both brief examples as illustrations and references to published works where the reader can find detailed information. As a reference work the book will also be valuable for the advanced student who wishes to inquire more fully into particular topics. The extensive bibliography at the end of the book lists all references cited in the text.... F. HOLE
